DETAILED ACTION

Withdrawn Rejections

The rejections under 35 USC 103 over Cao in view of Pinnavaia has been withdrawn.

Response to Arguments

Applicant's arguments filed 12/22/08 have been fully considered but they are not persuasive.

Applicant argues that there is no in haec verbum requirement for support and that one of ordinary skill in the art would understand that the present invention required the absence of water.

However, it appears that the complex would be produced in a moderate amount of water. The instant specification only recites once that it appears that the system removes "most" of the water created in the reaction (page 12, lines 21-22). It does not appear that the specification recites the removal of any and all water created in the reaction. Therefore, it appears that the complex forms in the presence of some water. From this inference, it follows that combining a source of inorganic oxide with an organic complexing and pore forming agent does not require an absence of water. Some water may be present according to the specification. It is unclear how much water can be present such that the complex will still form. However, it appears from the specification that some water is tolerable in the process.

Specification

Art Unit: 1793

The amendment filed 12/22/8 is objected to under 35 U.S.C. 132(a) because it introduces new matter into the disclosure. 35 U.S.C. 132(a) states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: "in the absence of water" at page 2, line 4.

Applicant is required to cancel the new matter in the reply to this Office Action.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-3, 5-23 and 25-28 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

The recitation in claims 1, 14, and 25 "combining a source of an inorganic oxide with an organic complexing and pore forming agent in the absence of water" does not appear to have support in the specification pointed out by the applicant. However, it appears that the applicant has support for the limitation --combining a mixture consisting of a source of an inorganic oxide with an organic complexing and pore forming agent--.

Conclusion

Art Unit: 1793

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
